

The MEET Project presents:

Course in Mitochondrial Medicine
December 1-3, 2014

The University Residential Centre of Bertinoro (Ce.U.B.), Bertinoro di Romagna, Italy.

**20 MEET
FELLOWSHIPS
ARE AVAILABLE!**

Course Description:

Mitochondrial Medicine is a relevant, steadily expanding area of medicine. The complexity of the metabolic pathways associated with mitochondrial energy homeostasis and the peculiar genetics dictating mitochondrial inheritance in humans, account for the extraordinarily wide spectrum of clinical presentations and genetic abnormalities associated with mitochondrial disorders. This Course on Mitochondrial Medicine intends to offer to European biochemists and biologists, geneticists and physicians the basic and clinically-oriented information on this frontline scientific field, through an articulate program organized in morning plenary lectures and afternoon Meet Researchers presentations.

Faculty members:

J. Guy (University of Miami, USA), J. Montoya (Universidad de Saragoza, Spain), H.T. Jacobs (University of Tampere, Finland), G. Lenaers (Montpellier University, France), C.T. Moraes (University of Miami, USA), R. Rizzuto (University of Padua, Italy), R. Rossignol (University of Bordeaux, France), E. Schon (Columbia University, Usa), E. White (Rutgers Cancer Institute, NJ, USA), Y. Bai (Columbia University, USA).

With the participation of **Mitocon** and **International mito-patients** associations.

Afternoon sessions will be dedicated to the MEET young researchers presentations
